

alfan

flexible packaging solutions

Processing

FLEXOGRAPHIC PRINTING

Flexographic printing up to 8 colors.

Alfan is equipped with the best machines and technologies available on the market today and this allows us to work at the highest quality levels.

LAMINATION DIVISION

Pairing is possible with water-based, solvent-based, solvent-less and hot melt adhesives. Alfan is able to create all the articulated structures that the flexible packaging sector, both food and non-food, needs today.

SLITTING DIVISION

Alfan has a department equipped with the latest generation cutters whose productivity (combined with the highest technological and quality standards) allows us to prepare orders quickly, satisfying the customer's needs. Laser perforation and micro-perforation are additional processes that set Alfan apart from the competition.

BAGS DIVISION

Alfan is able to produce various types of mono-film and multilayer bags and pouches suitable for food packaging (in ATM or vacuum) or industrial applications.

*“Ready to satisfy every customer request
Quality and imagination for a perfect product.”*

SUSTAINABILITY:

Ecological sustainability is an important issue for the packaging industry; respect for the environment has an ethical value for us and is reflected in our work.

We have adopted various solutions to make less impact on the ecosystem.

Our concern for the environment translates into a programmatic and operational commitment, both in terms of product processing and waste disposal and in the development and design of new packaging.

Products

FILM REELS AND BAGS

Alfan specializes in the production of flexible packaging, mainly for the packaging and preservation of food, especially fresh processed products. All the structures produced by Alfan are certified for food contact.

Alfan also operates in the pet food, pharmaceutical, cosmetics, and industrial sectors, remaining synonymous with safety and quality.

The range of pouches produced by Alfan goes from simple mono-film pouches with heat seals to the more complex Doypack, made of laminated material, with a zipper and tear line.

Our flexible packaging solutions are created according to customers' requests. Therefore, we can create infinite customized products for different needs and uses.

*“Reels and bags for every sector,
a production of the highest level”*

QUALITY:

For Alfan, quality is an inescapable value at all levels, on the product front, in terms of manufacturing processes, and as a background of skills and certifications. Alfan selects and qualifies its suppliers and only works with the best raw material producers.

The BRCGS certification obtained is a guarantee of the highest quality.

Service

TECHNICAL ASSISTANCE

We assist our customers STEP-BY-STEP in designing and manufacturing every item.

The experienced technical department will analyze the samples provided by the customer, assess their functionality and, if necessary, suggest alternative solutions.

ANALYSIS LABORATORY

Alfan has a modern analysis laboratory that allows us to monitor the production process from the moment we purchase the raw materials and through the various processing stages all the way to the finished product, thus guaranteeing maximum product quality.

GRAPHICS DEPARTMENT

The company's in-house graphics department personally assists the customer in managing files for new products or simply for modifications to existing installations. It also collaborates with the best companies in the sector for the realization of photopolymers.

LOGISTICS

In-house logistics guarantee fast and punctual deliveries anywhere in the country and internationally.

"From conception to finished product, we assure assistance and quality."

MATERIALS USED:

We are able to process all the materials used in the flexible packaging sector to satisfy the customers' requirements 100%.

Over the years, collaborating with the world's leading manufacturers of raw materials has enabled us to keep up-to-date with the most innovative materials.

BRCGS

Packaging Materials

CERTIFICATED

We are flexible to your needs, but we are strict when it comes to quality and certifications!

Our commitment requires us not only to adhere to internationally recognized standards but also to adopt more stringent rules even where they are not mandatory.

Achieving a BRCGS certification represents the highest level of world standards for food safety and a further guarantee for customers who choose us.

The BRCGS is the first packaging standard to be recognized by the Global Food Safety Initiative (GFSI).

It ensures Alfan complies with stringent health and safety requirements, including cleaning, inspection, and control of both the production site and individual products.

Alfan was founded in 1983 by Arturo Vagni and his partners. Since then, it has been creating lively and intelligent solutions for packers throughout Italy. The name Alfan originates from two words: aluminum and cellophane, from the first products made. After a few years, the company expanded its production with a new line of bags and with the purchase of a printing machine. Interpreting market demands, Alfan has expanded its offer and equipment, establishing itself as a leader in flexible packaging, mainly for the packaging and preservation of food.
